Rojina Adhikari

Cambridge, MA • rojina@mit.edu • (918)-345-0015 • github.com/rojinaadhikarii

Education

Massachusetts Institute of Technology — Cambridge, MA
B.S. in Computer Science/Artificial Intelligence (6-4) & Mathematics (18) — May 2029
Relevant Coursework: CS & Programming using Python, Math for CS, Microeconomics, Macroeconomics, Multivariate Calculus, Linear Algebra, LLMs from Scratch, AI Alignment

Oklahoma School of Science and Mathematics — Oklahoma City, OK
GPA: 4.0 | ACT: 36, SAT: 1540 — May 2025
Honors: 3rd Place Business Pitch Comp, 2nd Place DECA State Conference, Gold Presidential Volunteer Service Award

Work Experience

MassHealth Analytics — Boston, MA
Data Analyst Intern — May 2026 – Present

- Designed backend-to-frontend validation framework to cross-examine LLM-generated summaries against source datasets and eliminate model hallucinations.
- Developed Python and Selenium-based automation tool to extract dashboard metadata across 12 state agencies.
- Engineered regression testing suites that store baseline dashboard outputs and compare new runs to systematically detect structural drift and code bugs.

MIT Undergraduate Research Opportunities Program — Cambridge, MA
Data Science & AI Undergraduate Researcher, Senseable City Lab — September 2025 – Present

- Developed and maintained large-scale simulation pipelines to generate 1M+ compliant housing configurations.
- Implemented validation & data quality checks to ensure accuracy and reproducibility across simulated datasets.
- Investigated spatial heterogeneity & model transferability across geographic regions to understand performance degradation in AI prediction systems.

i2E, Inc. — Oklahoma City, OK
Data Science Intern — April 2024 – May 2025

- Developed computational models to inform investment decision-making for 10+ startups & examine how automation shaped workflow management.
- Analyzed time-series operational data to model firm-level workflows & labor allocation across business functions, improving workplace efficiency by 20%.
- Collaborated with analysts to translate performance metrics into structured data reports.

University of Tulsa Center for Real Estate Studies — Tulsa, OK
Student Researcher — April 2024 – October 2024

- Applied GIS mapping & regression analysis to uncover spatial patterns in real estate investment & urban growth.
- Co-authored published report translating empirical findings into 3 data-backed policy recommendations addressing economic challenges in the housing market.

Leadership & Projects

MIT Assistive Technology Club — Cambridge, MA
Adaptive Gaming Controller, Software Subteam — September 2025 – Present

- Develop OpenAI-powered agentic AI system processing multimodal inputs (screen captures + text) into structured executable actions using NLP pipelines.
- Design accessible software systems for visually impaired users to control & interact with digital environments.

MIT web.lab Programming Competition — January 2026 – Present

- Built a full-stack MERN web platform for discovering and reviewing study spots, featuring interactive maps and user-generated content.

MIT Sandbox Innovation Fund — January 2026 – Present

- Developing a micro-gig and peer-to-peer services platform prototype tailored specifically for college campuses.

Skills & Activities

Skills: Python, Java, HTML/CSS, JavaScript, SQL, Snowflake, Tableau, Git, AWS, MATLAB, GIS, Figma
Activities: IEEE/ACM, Society of Women Engineers, Undergraduate Society of Women in Math, Bitcoin Club Logistics Committee, Alpha Chi Omega (Chapter Relations & Standards, Philanthropy, Recruitment)
